CONSTANT DEVELOPMENT

Rookie EV are the latest versions of the top models of the Tony Kart and Kosmic chassis range, suitable not only for experienced drivers but also for youngest drivers in Mini class.

All the improvements brought to 2019 chassis have been thought, developed and tested by the Tony Kart and Kosmic official racing team during the most important competitions around the world: these are the essential conditions for giving all the drivers high quality and reliable karts..

The Rookie has new bare frame geometry, a new brake system, new stub axle and seat available in two sizes.

ROOKIE EV

The chassis for the Mini class is completely new, with characteristics similar to the top models of Tony Kart and Kosmic Range.

The bare has new geometry, keeping unchanged the wheel base of 950mm and the tubes diameter of 28mm.

The **Rookie EV** is also characterized by a new design profile, with 2019 graphics similar to the Racer 401R.

The OTK Kart Group R&D Department carried out a great job on the brake system, called BSM4, it has been completely re-designed.

Its main features are: Ergal caliper equipped with 4 pistons, self ventilated brake disc and one-piece brake pump in Ergal.
